3599 Plant Ave. Ext., Blackshear, GA

Introduction

Considering the COVID-19 pandemic, Global Partnership for Telehealth, Inc. (GPT) is increasing capacity so that telehealth can be leveraged in a more expansive way to meet the unique healthcare needs presented at this time. Telehealth offers exceptional capacity for remote screening, triage & treatment, and could be a powerful tool for reducing transmission of the disease to and among health care workers and patients who are not infected.

GPT's Proprietary Telehealth Application, Pathways – A solution for today's COVID-19 Pandemic and tomorrow's delivery of virtual healthcare any place, any time.

Pathways is a web-based, telehealth consultation software that was built using 14+ years of clinical partner feedback to develop the most intuitive solution for providers, health systems and telehealth networks. Backed by the cloud, Pathways leverages Amazon AWS to provide 99.99% reliability. Because it is a web-based solution, there is no software to install and maintain. This means faster consultations with less frustration. It only requires Google Chrome to be installed on the user's device to launch services fast and easily.

GPT's History & Growth

Global Partnership for Telehealth, Inc. is a Georgia based, nonprofit telehealth network that has been serving our mission since 2004. To date, there have been hundreds of thousands clinical consultations with 150+ specialists & primary care providers representing a variety of pediatric, adult, and geriatric services & specialty care.

GPT has a longstanding and successful record of accomplishment in providing technical assistance in the development of sustainable, cost effective telehealth programs to serve rural and medically underserved areas and populations. GPT's success has been built on providing a telehealth platform where partnerships are established between providers and receivers of telehealth services who easily access each other through a single robust and secure platform. GPT's success is related to many factors but include the following differentiating keys. GPT is:

- non-partisan
- non-academic

- non- healthcare system based
- is a nonprofit
- is mission focused and passionate about leveraging telehealth technologies for the good of all.

Even though other telehealth systems exist in, many agencies have seen the value of being a part of the GPT network and have chosen to collaborate with GPT to parallel their existing networks which broadens the reach and scope of these other networks. Thanks to our robust solution and years of experience in the space, Pathways and GPT are uniquely equipped to expand existing networks, build new networks, or connect a single provider to their patients.

Southeast Telehealth Resource Center

GPT has been recognized by the U.S. Department of Health and Human Services' Health Resources and Services Administration (HRSA) as one of the nation's expert telehealth nonprofit companies, having been awarded the privilege to serve as the [Southeastern TeleHealth Resource Center](#) (SETRC) four times since 2010. SETRC's mission is to provide an applied approach to telehealth education and technical assistance services to health care providers, individuals, and organizations in GA, AL, SC, and FL. SETRC serves as a resource to anyone interested in telehealth; from developing a new telehealth program to expanding an existing program. Contact Lloyd Sirmons, SETRC Director lloyd.sirmons@setrc.us

SETRC is part of the [National Consortium of Telehealth Resource Centers](#) which is one of 14 Telehealth Resource Centers that includes 12 Regional Centers, all with different strengths and regional expertise, and 2 National Centers which focus on areas of technology assessment and telehealth policy. SETRC is made possible by Grant #G22RH30350 from the Office for the Advancement of Telehealth, Health Resources and Services Administration, DHHS
